Sender Policy Framework

A host's Sender Policy Framework (SPF) describes who can send mail on its behalf. This is done by publishing an SPF record containing a series of [rules](#). Each rule consists of a qualifier followed by a specification of which domains to apply this qualifier to. For more information please see [openspf.org](https://tools.ietf.org/html/rfc7208).

Qualifier	Mechanism	Argument
+ (Pass)	ip4	177.20.144.113
+ (Pass)	ip4	177.20.144.62
+ (Pass)	ip4	177.20.144.83
+ (Pass)	ip4	177.20.144.92
- (Fail)	all	

Modifiers extend the functionality of SPF records. The most common one is the redirect which indicates another host contains the SPF record being searched for.

Modifier	Argument
----------	----------

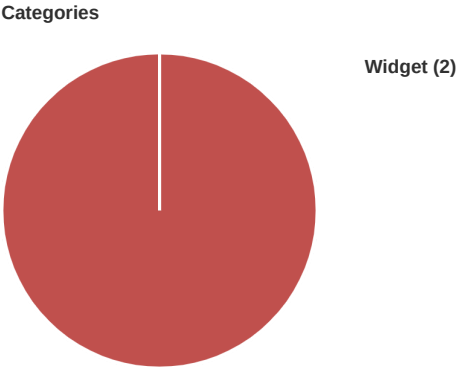

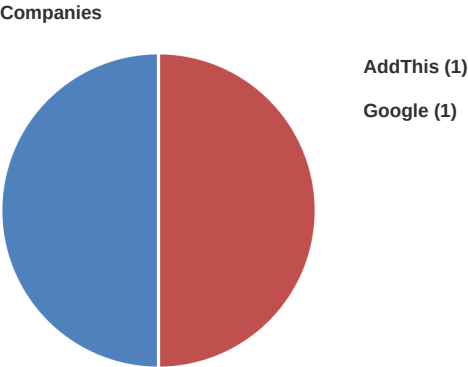

DMARC

DMARC (Domain-based Message Authentication, Reporting and Conformance) is a mechanism for domain owners to indicate how mail purporting to originate from their domain should be authenticated. It builds on SPF and DKIM, providing a method to set policy and to give reporting of failures. For more information please see dmarc.org.
This host does not have a DMARC record.
